

Master data management, optimized performance and scalability – that’s Sana Enterprise

Enterprise class features & performance: available for Dynamics NAV/AX and SAP.

Today’s customers demand greater value, better service and more convenience. With Sana Enterprise, fitted for Microsoft Dynamics NAV/AX and SAP, you can fulfill those needs and master all your data from a single point of reference. It’s the integrated e-Commerce platform that guarantees uptime, scalability and high performance.

100% integrated

Where standalone e-Commerce platforms require endless interfacing projects, part of Sana is installed within the ERP system allowing tight cooperation with its business logic. As a result, your ERP system is the engine of your online store environment, real-time.

Scalability where needed

We understand that your web store needs to deal with peak times. That’s why we offer load

balancing, where we optimize resource use, maximize throughput, minimize response time and avoid overload. No matter what load to expect in your store or where your servers are located, you can rely on Sana to handle this.

Optimized performance & SQL clustering

Sana Enterprise is enhanced to optimally serve your web pages, combining high traffic efficiency with the need for (customer) specific data – thanks to our seamless integration with your ERP system. All this includes advanced warm-up support, full-page caching and distributed caching. Additionally, Sana Enterprise can be set up in a clustered database environment by offering SQL clustering support. This way, your integrated web store relies on the highest infrastructural standards when it comes to data handling & reliability.

Master data management

No more duplications or manual entries in multiple systems. We offer a single centralized view of product and customer data when using the Product Information Management (PIM) of Perfion*. Because of the seamless integration between Perfion and Sana, extensive product enrichments are available for both offline and online publications. The same is true for managing your e-mail marketing activities with Copernica*. All contact, order and shopping cart information from Sana Commerce will be automatically synchronized in your Copernica database. This way, you can easily target your customers and achieve more sales and increase loyalty.

*licenses for Copernica or Perfion are not included.

Close monitoring

Sana Enterprise offers advanced diagnostic capabilities to provide a permanent stream of information regarding the state of your system. The Sana health check zooms in on the interface, the availability of web services, details around the state of the platform (as well from within the ERP), the web server and many other indicators that may have an impact on your web shop. This

way, it's easy to recognize and resolve any issues immediately.

Field sales support

Sana Mobile provides an easy entry in the sales supporting capabilities of your B2B sales portal and is part of the Enterprise license. We provide you with five app licenses for one year.

Additional services

With more than 20 years of e-Commerce experience and a worldwide network of partners, Sana offers a complete set of additional services that are essential to successfully run your online business, such as advice on Search Engine Optimization (SEO), online marketing, hosting, online payment providers and graphic design.
